1 Types of SUSE Multi-Linux Manager offerings at CSPs

- Both SUSE Multi-Linux Manager PAYG and SUSE Multi-Linux Manager BYOS are available from the Marketplaces

1.1 SUSE Multi-Linux Manager PAYG

- When to use it?
 - **Always, if you run in clouds**
- Where to get it?
 - directly from the Amazon or Azure Marketplace. Unfortunately there is no offering for Google today.
- Why are there 2 listings and which one should I use?
 - We have 2 listings for SUSE Multi-Linux Manager, "EU and UK only / EMEA Orders Only" and "non-EU and non-UK only", you should pick the listing that reflects in which country **your AWS & Azure account gets billed**
 - You may need to be logged in into the CSP portal in order to let the CSP system know your country of billing.
- Do i need subscriptions?
 - No, its all automatic - no hassle with subscriptions
- I have SLES4SAP PAYG instances in the cloud, will i be billed for them?
 - No, SUSE Multi-Linux Manager is aware of the embedded LCM subscriptions in the SLES4SAP PAYG offer.
- **What are the benefits?**
 - Simplified purchasing (Cloud Spend on CSP)
 - Pay only for what you use

- No subscription required
- Variable Monthly billing – based on peak usage
- EDP (Enterprise Discount Plan) / Committed Spend / MACC (Microsoft Azure Consumption Commitment)
- Automatic Subscription compliance
- Easier setup
- Sounds too good - What to be aware of?
 - Billing starts from when the first managed client is on-boarded.
 - To stop billing, delete clients from SUSE Multi-Linux Manager or shutdown SUSE Multi-Linux Manager instance
 - **No ‘Migration’ from BYOS SUSE Multi-Linux Manager to PAYG version, you need to Redeploy, re-onboard clients**
 - If you want to manage BYOS clients with SUSE Multi-Linux Manager PAYG you need to buy the BYOS subscriptions and set them up in SCC.
- Who does the support?
 - As it is a SUSE offering - SUSE will provide L1-L3 support
- How do i get support?
 - The PAYG offer has a link to <https://scc.suse.com/cloudsupport>, where you need to upload your supportconfig to open a ticket.
 - For details please have a look at <https://documentation.suse.com/suma/4.3/en/suse-manager/specialized-guides/public-cloud-guide/payg-support.html> or <https://documentation.suse.com/suma/5.0/en/suse-manager/specialized-guides/public-cloud-guide/payg-support.html>
- Is there a FAQ?

- YES, look at <https://documentation.suse.com/suma/4.3/en/suse-manager/specialized-guides/public-cloud-guide/public-cloud-faq.html> or <https://documentation.suse.com/suma/5.0/en/suse-manager/specialized-guides/public-cloud-guide/public-cloud-faq.html>

1.2 SUSE Multi-Linux Manager BYOS

- When to use it?
 - If you used SUSE Multi-Linux Manager within the CSPs in the past
- Where to get it?
 - directly from the Amazon, Azure and Google Marketplace.
- Do i need subscriptions?
 - Yes, you need subscriptions for the SUSE Multi-Linux Manager Server itself and **need to buy LCM subscriptions for every managed client** (min. 10) from SUSE or a SUSE distributor.
- Who does the support?
 - As it is a SUSE offering - SUSE will provide L1-L3 support
- How do i get support?
 - Login and open your support ticket via your SCC account.
 - The SUSE Multi-Linux Manager is supported directly by the worldwide SUSE Global Technical Support team or your assigned Premium Support Engineer. This is true whether the SUSE Multi-Linux Manager subscription is purchased directly from SUSE or the Azure Marketplace.
 - Please ensure your SUSE Multi-Linux Manager product is registered to your SUSE Customer Center (SCC) organization (<https://scc.suse.com>).
 - Once logged in to the SCC, use the "Support" option under "My Tools" on the homepage to open a support case with SUSE. If you have any questions, a FAQ and a User Guide are available under the "Help" link on the landing page.

2 Where to find documentation?

- SUSE Multi-Linux Manager documentation is available publicly at <https://documentation.suse.com/suma/4.3/> or <https://documentation.suse.com/suma/5.0/>
